

Farms in United State pay the least attention to ducks

China has domestication of duck dating back to 4000 BC, while Ducks are very hard to find in the U.S. supermarkets. Though most people believed ducks are too fat to eat, Ducks are good sources of protein, micro-element, and Vitamin B-6/ B-12. Ducks also produced high-value products including liver pate, down feathers and smoked meat products. The duck inventories in U.S. is also interesting. More than half of the states in U.S. produces less than 10000 heads of ducks, while some states, like Indiana, produces also half of the inventories of Duck in U.S.

Total Duck inventory per 1000 in the United State in 2012

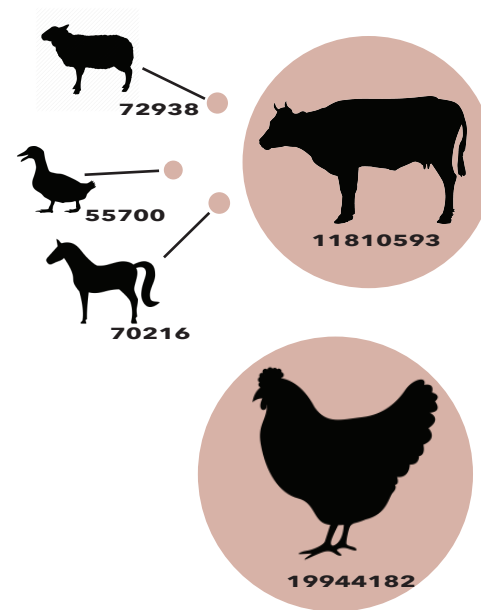

Key: 0 1-10 11-30 31-100 100-1000 1000

Ducks are produced the least in U.S farms
